

AVL

AVL has for years been simply known for its GPS location functionality, today's AVL systems offer so much more benefit than locating your assets on a map. They are an effective tool that will reduce costs, increase revenues through improved productivity, efficiency and customer service & aid compliance with OH&S.

Systems are available in scalable formats to match customer requirements providing such features as real time visibility on vehicle and driver location for effective dispatching, analysis of historical data for driver behavior, routes, customer site visits, productive vehicle usage, two-way messaging between office and vehicle and job dispatch direct to your vehicles.

Customers can access information via various GUI options using web browser service or local applications; a comprehensive suite of reports can be generated on demand or schedule to match your requirements. The hardware solutions include additional value adds such as duress buttons, I/O connectivity to monitor ignition, doors etc, RFID tagging systems to track assets associated to a vehicle and mobile data terminals.

AA Radio partners with key manufactures of AVL technology in order to meet customer requirements.

We provide full turnkey solutions combined with full service & support.
